

The Ideal Solution: A Mobile Shipping and Receiving Station

Label printing is a critical element in a warehouse environment. Unfortunately, there are dozens of different types of labels and forms to manage. Lexmark's integrated strategy that combines both thermal and laser print solutions can help.

The Lexmark D500 thermal printer, with its small footprint, is ideal for environments that are space conscious. The 305 output resolution offers outstanding print quality for your bar code and graphic output needs. With a print speed of 4 inches per minute, printing is also quick and efficient.

Lexmark keeps it moving.

The Lexmark D500 can print labels as small as .06" and up to 15" long. This flexibility makes the D500 ideal for printing shelf tags, put-away tags, pick tickets, shipping labels and more.

The Lexmark D500 thermal printer is also available in a wireless model that allows you to utilize the printer anywhere in your shipping and receiving operation. Combine the wireless Lexmark D500 thermal and x215 multifunction laser along with a mobile PowerCard to create the ideal solution for a mobile shipping and receiving station.

A mobile PowerCard equipped with Lexmark wireless printers offers a flexible independent power supply along with rugged steel construction to enable in-aisle printing, picking and packing and inventory management - all at the point of activity. Accelerated processing adds to the overall cost efficiency and productivity of this integrated wireless mobile solution.
