

## A solution that enables physician orders to get there – STAT

Many healthcare organizations today rely on their fax and phone when it comes to executing prescriptions or medical orders. Typically, a nurse receives a handwritten order from the doctor and may call or fax it to the appropriate department for processing.

Sounds simple. But in reality, this process breaks down easily and contributes to the headaches of maintaining patient safety and reducing medical errors.

Fax machines can produce errant lines, dots and marks that can be misconstrued as decimal points or actual parts of the order. This is further complicated by illegible handwritten orders. Once received, phone calls may be necessary for clarification, or worse, interpreting an order incorrectly could lead to serious medical errors.

This is just one element of the physician order process. There are other issues that contribute to headaches. Fax lines that are tied up. Confidential patient information routed to fax machines used by multiple people. STAT orders that sit for long periods of time.

### Lexmark's physician order routing solution:

- Up to ten times faster than traditional fax.
- Automates the delivery of physician orders to the receiving department(s).
- Assists in achieving HIPAA compliance.
- Offers simple, visual and audible alerts for orders of a STAT nature.
- Leverages your organization's existing network infrastructure.
- Enables auditing features for tracking.
- Is reliable and user friendly.

**The Lexmark Physician Order Routing Solution bundle will be customized to fit your business needs.**
