

An innovative solution for your pick and pack application

Picking and packing is the most paper-intensive process in manufacturing and distribution operations. Studies confirm that printing costs one to three percent of an enterprise's annual revenue.¹

In the picking and packing operation, at least two, and often more paper documents are required, such as a packlist and picklist printed on an impact or laser printer, a shipping label produced on a thermal printer, and special instructions that are usually preprinted or photocopied.

This set-up requires multiple printing supplies, warranties, maintenance agreements, and specialized media that drive costs up and productivity down.

What can Lexmark do to help? We offer a variety of printer and print management software solutions, typically without any changes to your ERP, CRM or legacy systems. By implementing e-business solutions that minimize paper as part of the pick and pack process, we will empower you with the ability to build and ship faster, with better quality, increased flexibility, and lower your costs. Greater efficiency means increased worker productivity, improved customer satisfaction, and better business performance: results that flow right to the bottom-line.
