

Focused on decreasing medical errors?
We can help you.

As a healthcare professional, you're aware of the devastating statistics surrounding medical errors. What you may not know is Lexmark is a valuable resource. We have printing technology and partnerships to provide "best practice" solutions to reduce medical errors.

"Lexmark solutions are tailor-made for the healthcare industry. They identified where their equipment would solve problems within our organization and implemented the appropriate products."

CIO & VP of IT

Lexmark's color wristband solution is one example. It incorporates the printing of at least two patient identifiers in an effort to comply with JCAHO's 2003 National Patient Safety Initiative and to help you verify the identity of your patients. What distinguishes this solution from others is the addition of a color photograph of the patient on the wristband.

A clear color photo on the wristband helps ensure correct patient identification. This becomes especially critical in situations where patients are unable to respond to questions about their identity.

Additionally, bar coding on the wristband provides information that is linked to the patient's medical record – maximizing the possibility of error-free human interaction. These two identifiers work together to reduce the potential for error and help address the 5 rights of patient verification.

Lexmark has experience in developing and implementing cost effective, easy-to-implement solutions that focus on your number one business issue – the reduction of medical errors.
