

Now you can print from your mobile device while you're on the go.

As you run between meetings and customer sites, you rely on your mobile device (Blackberry, Treo, etc.) to communicate with your clients and colleagues. These devices extend your reach, enabling you to respond quickly and easily. But what about when you need a hard copy of the attachment that someone just e-mailed you? Then your “on-the-go” solution often slows to a crawl.

“Lexmark has again demonstrated its expertise in the Print, Move, and Manage space by providing another innovative tool for mobile users that allows print and fax functions from a Blackberry device. It is as easy to use as sending an email. This confirms we made the right decision for selecting Lexmark as our output solutions partner.”

–Tom Hines

Meyers Nave

Today, many people handle this situation by returning to their office to print, or they send the file to their administrative assistant, who then prints the attachment and faxes it back or delivers it in person. It's a slow, unprofessional process that increases administrative time and expense while creating unacceptable gaps in client service.

Lexmark keeps it moving. With Lexmark's Mobile Print Solution, you can send e-mail with attachments – Microsoft Office document types, images, PDF's and more – from your mobile device to a network printer or any fax number. Critical printed documents are delivered immediately, when and where you need them, with no burden on your administrative staff. It's a fast, professional and inexpensive process that leverages your investment in mobile technology while keeping you focused on your clients' needs.

The Lexmark Mobile Print Solution can be customized to fit your business needs.

Here's an example:

Software:

- Mobile Print Solution for 300 users
