

Get Critical Documents Into Your Existing EHR System-STAT

To improve the quality of care, reduce costs and enhance staff productivity, electronic health records (EHR) systems are being implemented in healthcare facilities across the nation. Used to its fullest potential, an EHR system actually produces a better patient "paper trail" than paper itself. Waiting on a laborious centralized scanning process to make critical documents available is a costly proposition. Centralized scanning processes take 24 to 72 hours before files are available to clinical staff—a delay that can be critical, especially in the ER, where patients are usually admitted and released the same day. For physicians, the inability to access current charts online can slow decision-making and increase the risk for errors; for the business department, centralized scanning slows down billing and revenue collection while adding cost.

Lexmark has the cure. Intelligent Lexmark multifunction devices located at nursing stations and other key sites can make critical information on paper documents available within minutes, not days - the first step towards a paperless hospital. Physicians can view patient charts online in real time and make treatment decisions without visiting the hospital, while billing and insurance claims can begin immediately, shortening revenue cycles and cutting costs. Lexmark can work with your HIS provider to ensure seamless integration into your EHR

Creating a more efficient document workflow is more important than ever, but that can be a challenge when you don't have the resources to implement the optimal solution. With more than 1400 consultative engagements and unmatched industry expertise, Lexmark is helping hospitals uncover processes that are gated by the speed of paper. Our recommendations increase efficiency, productivity and cost savings. We will help you integrate the improved document workflow solution into your hospital.

EXISTING PROCESS

1

Patient record sent to medical records at end of day.

2

Medical records department scans and verifies document.

3

Documents are then stored in your existing EHR.

4

Documents can be viewed at nursing stations, doctor's offices and business offices.

Total time: 24 hours

NEW PROCESS

1

Critical documents are scanned at the time they are created

2

Documents are then stored in your existing EHR.

3

Documents can be viewed at nursing stations, doctor's offices and business offices.

Total time: 2 minutes

Customized icons on the operator panel make it easy to send an electronic document to multiple points of need.
